Lucas Moreira Pires

Backend Developer at Nilo Saúde | Health Tech

Salvador, Bahia, Brazil

Summary

As an experienced software developer, I have worked with various technologies and frameworks, including Python, Django, Vue.js, and Flutter. Throughout my career, I have gained expertise in developing web applications, REST APIs, ERPs, ETL applications, and microservices, with a focus on integration implementation using external and internal APIs. I have also worked on the development of delivery driver applications, as well as georeferenced information documentation systems.

In my most recent position at Nilo Saúde, I have been responsible for implementing integrations with external and internal APIs through microservices, while at PlanD Data Intelligence, I worked as a backend developer of REST APIs, ERPs, and ETL applications for e-commerce businesses. At TrazFavela Delivery, I developed the delivery driver application for the startup, while at GIIROMAPS, I participated in the development of a system for georeferenced information documentation and fiber optic network infrastructure. During my internship at DESENBAHIA, I contributed to the development team of the company's first application using Flutter.

My skills include data structures, software development, teamwork, and proficiency in various technologies, including Google Cloud Platform, Git, GitHub, PostGIS, Docker, Linux, and PostgreSQL.

Experience

Grupo FCamara

Consultant Developer

October 2022 - Present (8 months)

Backend Developer (assigned to Nilo Saúde).

Nilo Saúde

Back End Developer

October 2022 - Present (8 months)

Integration implementation with external and internal APIs through microservices.

PlanD Data Intelligence

Python Back End Developer

June 2021 - October 2022 (1 year 5 months)

Software development using Django (Python).

Backend developer of Rest APIs, ERPs, and ETL applications to automate data analysis for e-commerce businesses using Python.

TrazFavela Delivery

Mobile Developer

September 2020 - June 2021 (10 months)

Salvador, Bahia, Brasil

Development of the delivery driver application at the TrazFavela delivery startup.

GIROMAPS

Back End Developer

March 2019 - June 2021 (2 years 4 months)

Salvador, Bahia, Brasil

Participation in the development of a system for georeferenced information documentation and fiber optic network infrastructure using the Django framework.

DESENBAHIA - Agência de Fomento do Estado da Bahia S.A.

Mobile Developer

May 2019 - April 2020 (1 year)

Salvador, Bahia, Brasil

Participation in the development team of the company's first application using Flutter.

iVision Lab - UFBA

4 years 1 month

Research Student

July 2018 - June 2019 (1 year)

Instituto de Matemática e Estatística, UFBA - Ondina, Salvador - BA

Simplification of neural networks for facial biometric analysis on mobile devices.

Research student

June 2015 - July 2018 (3 years 2 months)

Instituto de Matemática e Estatística, UFBA - Ondina, Salvador - BA

Adapt, optimize, and develop the algorithm for pore extraction in high-resolution papillary impressions (fingerprints, palmar, and plantar) to be collected through a new sensor with a resolution capacity above 2400ppi, as well as through a commercially available sensor with 1000ppi resolution.

Education

Universidade Federal da Bahia

Graduação, Ciência da Computação · (2022)
